Title: dial-me-spinner rev B bench: NFC ground plane and tuning

Size: A3	Date: 2026-10-23	**Rev: 1**
KiCad E.D.A. 9.0.9		Id: 1/2

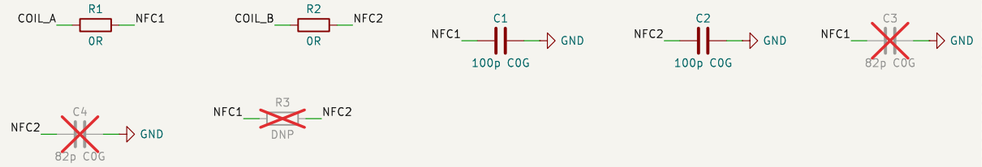

Coil contacts (top, under the plate's pads A and B)

W1 under pad A (theta 210), W2 under pad B (theta 190), both at r 23. Wire or spring them up to the plate. The top is otherwise one GND pour: the stand-in for the main board's In1 plane.

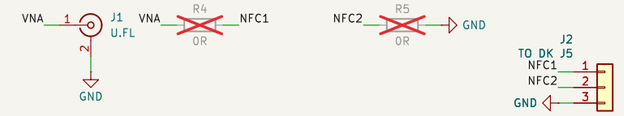

Tuning network (bottom)

R1/R2 0R in series: room for a small damping R per leg. C1/C2 100p C0G fitted (with the IFL05K). C3/C4 DNP in parallel: +82p for the no-ferrite runs, or to trim. R3 DNP across the coil (0603): parallel damping.

NanoVNA port and DK header (bottom)

VNA: fit R4 + R5 (0R), unplug J2. The VNA sees NFC1 to GND with NFC2 grounded. DK: J2 to the DK's NFC connector J5 with a short twisted pair; R4/R5 stay off.

ERC

GND arrives from the DK through J2 or from the VNA through J1.
